Electrification
Opportunities for multiple win wins?!

PRESENTED TO
Executive Forum:
Business Collaboration to Accelerate Electric Vehicle Markets

PRESENTED BY
Jurgen Weiss

October 5, 2017

Electrification is a BIG opportunity for many

60-75% or 3,000TWh potential increase in sales relative to 2018
Over 100% increase with higher VMT

TaaS market estimated as $ trillions

$2 trillion in investment in solar and wind for a fully electrified green grid, plus perhaps $250 billion for EVSE

*) Caveat: Generation and EVSE costs are very rough estimates

Costs may be small compared to savings

Fuel cost savings alone are likely large compared to incremental EVSE investment needs.

Potential LDV Fuel Cost Comparison

![Graph showing fuel costs](image)

- **Conventional ICE Gasoline Costs**
- **100% Electrification Electric Fuel Costs**

Sources: EIA AEO 2017

$450 billion fuel savings annually

$4.5 trillion fuel savings over 10 years

Savings are considerably larger than EVSE infrastructure costs ($250 billion/year)

Assumes predicted sticker price parity, but does not include many other private (lower maintenance, etc.) and social (including GHG) benefits.
Technology/preferences make electrification likely and desirable... and it is critical for GHG reduction

**Economy-Wide GHG Emissions**

**Without Electrification**

- AEO with 50% Solar DG Potential
- Decarbonized Electric Sector
- 80% Reduction from 1990 Levels
- 2,400 MMT Gap
- 2015 36%

**With Electrification (Technical Potential)**

- 80% Reduction from 1990 Levels
- Full Electrification of heating and transportation
- 2015 -72%
Electrification could happen way faster than you think

AEO Electric Light-Duty Vehicle Sales Forecasts

Historic IEA PV Projections over time

Long term EIA EV forecast remains flat like historic IEA PV forecast

EV adoption likely even more like “tech” than PV

There will be winners and losers – early action may decide who is who

Potential winners/disruptors have lots of capital to disrupt

Likely losers have much to lose and will likely fight hard

Dr. Jurgen Weiss is a Principal of The Brattle Group and spearheads the firm’s deep decarbonization and electrification initiatives. He advises utilities, governments and NGOs in North America, Europe, Asia and the Middle East on issues such as renewable energy economics and integration, energy efficiency, storage, carbon market design, the interaction between electricity, gas and transportation, and the impact these changes have on existing assets, market structures, and long-term planning.

He was a leading author of Brattle’s recent report entitled “Electrification: Emerging Opportunities for Utility Growth”. Jürgen has testified in U.S. state and federal courts, as well as in state regulatory proceedings on related issues. He has served on advisory councils as diverse as one for California's Low Carbon Fuel Standard, the U.S. Department of Energy’s Wind Task Force and the King Abdullah City of Atomic and Renewable Energy in Saudi Arabia.

Dr. Weiss holds a B.A. from the European Partnership of Business Schools, an M.B.A. from Columbia University, and a Ph.D. in Business Economics from Harvard University.

The views expressed in this presentation are strictly those of the presenter(s) and do not necessarily state or reflect the views of The Brattle Group.
